

# Appendix Figure C.1. Institutional comparison in the outside-option plane

Prior  $\nu = 0.35$ ;  $m = 4$  weak states;  $\beta = 0.90$

**Analytical boundary**

- $\text{—}$   $\nu = \nu^*$      $\text{---}$   $\nu = \nu_{SP}$      $\cdots$   $o_0 = \beta o_1$
- $\text{-- --}$   $\nu = \nu_{SE}$      $\text{—} \cdot$   $o_0 = 1/m$      $\text{—} \cdot$   $o_1 = 1/m$

**Private-rule comparison**

- H indifferent
- H prefers majority
- H prefers unanimity
- No comparison: no pure-vote PBE (unanimity)

The triangular domain satisfies  $0 < o_0 < o_1 < 1$ . Colored polygons report the type-specific payoff comparison between unanimity and majority; the neutral hatched polygon has no comparison because unanimity has no pure-vote PBE. The worked example is  $o_0 = 0.100$  and  $o_1 = 0.350$ . All boundaries are evaluated analytically rather than filled by a classification grid. Note: Model-generated regions; all boundaries closed-form.
